Methodology

Environmental Impact Assessment

Functional unit	<p>The functional unit is a quantified performance of a product system for use as a reference unit. One of the primary purposes of a functional unit is to provide a reference to which the input and output data are normalized (in a mathematical sense).</p> <p>The functional unit of this analysis is "500 page(s) of A4 paper for writing".</p>
Impact Indicator	<p>The impact is measured through the "IPCC 2013 GWP 100a" method.</p>
Electricity impact calculation method	<p>Following guidelines from the GHG Protocol, the impact of electricity is calculated using the location-based approach. This means that the emission factors used represent the average annual carbon intensity of the power grid in the country the processes take place in.</p>
Hypothesis	<p>Manufacturing Processes and associated loss percentages are assumed based on materials in the product.</p> <p>The electricity is based on the average in the country of manufacturing.</p> <p>Transportation is based on the common routes between the country of manufacturing and the country of sale.</p> <p>No replacements during the lifetime, therefore there are no emissions corresponding to the usage phase.</p> <p>The End of Life is based on the average waste management process of the materials in the product.</p>

Environmental Impact Assessment

System Boundaries

The scope of this research includes the complete lifecycle of a piece of paper from raw material extraction to disposal options for each material, which is the cradle-to-grave perspective.

Exclusions

The impact of secondary packaging impact and writing utensils are excluded from this assessment.

02

Results

1.207.001 (sold in SE)

Climate Change

Step	Impact (kg CO ₂ eq)	Percentage (%)
Raw Material Extraction and Processing	4.15	63.99 %
End-of-Life Treatment	1.42	21.96 %
Transportation and Distribution	0.66	10.21 %
Manufacturing	0.25	3.85 %
TOTAL	6.49	100.00 %

1.207.001 (sold in SE)

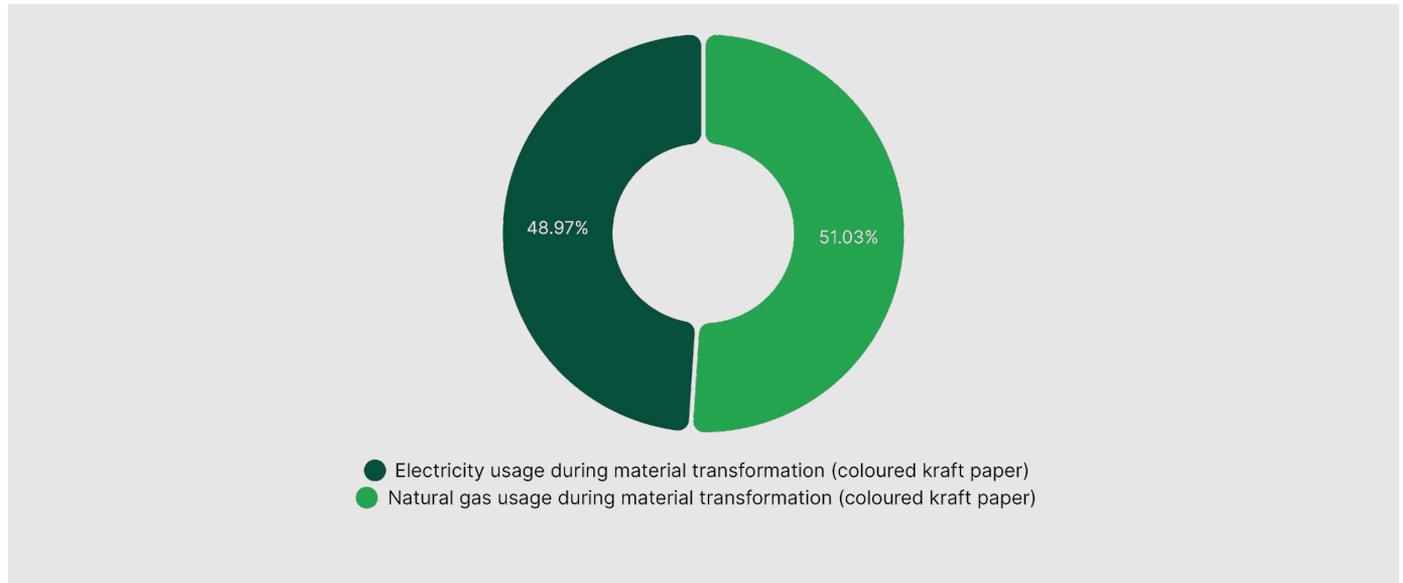

Climate Change - Raw Material Extraction and Processing

Activity	Emission Factor Num	Quantity	Impact (kg CO ₂ eq)	Percentage (%)
Sourcing of raw material (coloured kraft paper)	1	3.71	4.15	100.00 %
TOTAL			4.15	100.00 %

1.207.001 (sold in SE)

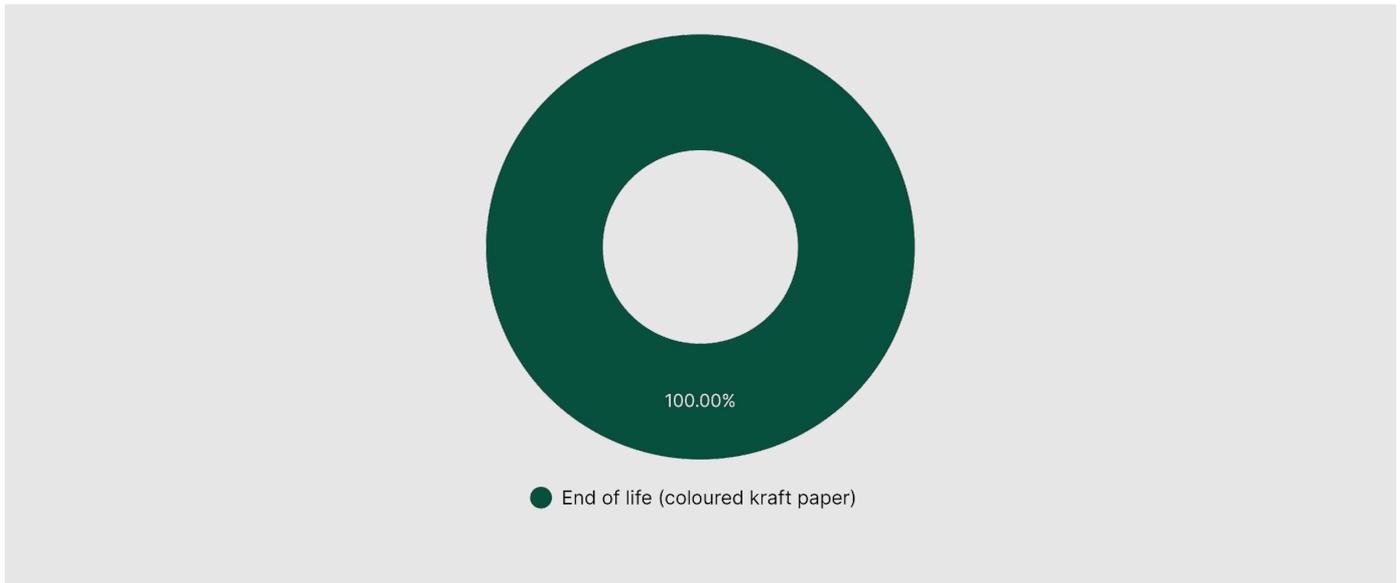

Climate Change - Manufacturing

Activity	Emission Factor Num	Quantity	Impact (g CO ₂ eq)	Percentage (%)
Natural gas usage during material transformation (coloured kraft paper)	2	0.7	127.52	51.03 %
Electricity usage during material transformation (coloured kraft paper)	3	1.31	122.38	48.97 %
TOTAL			249.9	100.00 %

1.207.001 (sold in SE)

Climate Change - End-of-Life Treatment

Activity	Emission Factor Num	Quantity	Impact (kg CO ₂ eq)	Percentage (%)
End of life (coloured kraft paper)	5	2.47	1.42	100.00 %
TOTAL			1.42	100.00 %
